## D01 Hagginbottom STORM DRAIN PUMP STATION REHABILITATION PROJECT

OCTOBER 2017

ISSUE 1

### About this Newsletter

This newsletter provides current information about the D01 Hagginbottom Storm Drain Pump Station Rehabilitation Project. If you have additional questions, please contact the department staff listed on the right. A project map is printed on the back of this newsletter for your reference,

### Background

The D01 Hagginbottom Storm Drain Pump Station is located west of 4967 Marlborough Way. This station was originally constructed in 1960. All storm water from the adjacent 763 acre water shed is drained or pumped through this station into the American River. It is critical that the station is functional and reliable to provide flood protection for this neighborhood.

While well maintained, the electrical equipment at the station is outdated and in need of upgrading. Due to the age of the electrical equipment, replacement parts are increasingly difficult to find. This is particularly important in a storm event, when having easily accessible replacement parts is critical.

### Project Description

This project will upgrade the station's electrical equipment to current industry standards. These upgrades include new electrical and instrumentation equipment at the station. Automated trash racks will be installed to eliminate the labor-intensive manual trash rack cleaning and allow debris removal when the station is unstaffed. These upgrades will significantly improve the station's safety, functionality, and reliability to better provide flood protection to the area.

### Project Schedule

- Board of Supervisors Approval – November 2017
  - Bid Date – December 2017
  - Board of Supervisors Award – January 2018
  - Begin construction – March 2018
  - End construction – October 2018
- All dates are tentative and subject to change
